

Informed Consent-Wrinkle Reduction/ReFirme Skin Tightening

Printed Name: _____

Syneron eMax Wrinkle Reduction/ReFirme Skin Tightening uses deep bi-polar radio frequency and infrared light energies to heat the dermal tissue that has collagen loss, to stimulate new collagen production and produce a firming effect in lax skin.

Wrinkle Reduction/Skin Tightening treatments are done in a series (usually 5) for desired results. The body starts to redeposit collagen beginning 90-120 day after the start of therapy. This treatment works best for skin tightening, acne scarring, scar treatments and wrinkle reduction.

eMax Wrinkle Reduction/ReFirme Skin Tightening is a safe and effective treatment for unwanted facial wrinkling and scarring. In most cases, there is no adverse affect from treatment. In rare instances a patient could experience a blister or sore following treatment. This is superficial and will heal with no adverse effects. Most patients note a redness that may last 2 hours up to 2 days following treatment. Patients may return to full activity following treatment and can apply make-up if desired. Treatments are spaced 2 weeks apart for optimal results or 3 weeks apart if doing in conjunction with IPL Photofacial. Clinical results may vary from patient to patient.

Because I have been properly informed of the possible adverse reactions I willingly accept treatment from Crestview Laser Aesthetics and understand that refunds are not given under these circumstances.

I understand it is important to inform my clinician as to any change in my medical condition or medications I any be taking. I understand that results may vary from patient to patient. I understand that the best results come in a series, usually consisting of 5 treatments in most cases. I understand in rare cases I could experience a sore or a blister following treatment. I understand that results may not be noticeable for up to 6 months after beginning treatment.
